

ZAKARIA RABEH

Manufacturing IT / MES & Automation Engineer — Lean Six Sigma Green Belt
zak-rab@outlook.com | France | linkedin.com/in/zakaria-rabeh-798031150 | Driving license

PROFESSIONAL SUMMARY

Final-year engineering apprentice at CESI (Lean Six Sigma option), currently IT Apprentice at OPmobility (Powertrain – C-Power). I deploy and integrate MES/PES (DELMIA Apriso) and connect the shop floor to IT via OPC UA, PLC automation (TIA Portal, Step7) and supervision tools (Node-RED, Grafana). Green Belt Lean Six Sigma. Available from October 2026, open to international mobility.

CORE COMPETENCIES

Automation & OT: PLC · TIA Portal & Step7 · SCADA · OPC UA · Node-RED
MES & IT: DELMIA Apriso (PES) · IT/OT integration · Grafana · DASIP (in-house) · SQL · React / JavaScript
Lean & Methods: Lean Six Sigma (Green Belt) · DMAIC · VSM · FMEA (AMDEC) · 5S / TPM · Project & risk management

PROFESSIONAL EXPERIENCE

OPmobility — IT Apprentice (engineering work-study)	Sep 2023 – Sep 2026
Powertrain – C-Power Alphatech site, France + deployment mission in Lublin, Poland	
- Deployed the PES/MES (DELMIA Apriso) on the Lublin production line as final-year project, enabling real-time, part-level production traceability. - Integrated the IT and OT layers by mapping OPC UA tags between Siemens PLCs (TIA Portal, Step7) and the MES across production stations (ST2–ST4). - Built production traceability at the VIGO plant: OPC UA client architecture feeding Node-RED flows and Grafana dashboards for live monitoring. DASIP (in-house OPmobility tool installed on machines that collects live data — temperature, torque and more — into real-time dashboards for on-site production monitoring): configured it, handled user support and technical tickets, and currently manage its roll-out across OPmobility’s European plants. - Configured and debugged the PES and trained local production teams.	
DEIF Meditteranea — Technical Support (work-study)	Oct 2018 – Jun 2022
Valbonne, France	
Supported control solutions (energy & maritime), including PID regulation for industrial automation.	

KEY ACADEMIC PROJECTS (CESI)

Green Belt Lean Six Sigma — DMAIC case study (Alstom rolling stock)
Analysed train-release delays caused by passenger-door non-conformities at end of assembly; led the Define phase (SIPOC, CTQ, stakeholder scoping) and Measure phase (data collection & statistical analysis).
Continuous-Improvement Consulting — capstone Lean project
Ran Gemba walks across production, quality, maintenance and logistics, then built a 5 M€ investment business case (<5-year payback) to raise productivity and competitiveness.
REIMON — Project Manager company-turnaround project (team of 4)
Led the recovery plan, coordinating the production (VSM), logistics and finance workstreams.

EDUCATION

General Engineering Degree (Ingénieur généraliste), Lean Six Sigma option	2023 – 2026
CESI Expected graduation: August 2026	
Engineering program in Electronics & Embedded Systems (completed to bac+4 level)	2020 – 2022
Polytech Nice-Sophia — foundation in embedded systems, IoT & power electronics	
DUT in Electrical Engineering & Industrial Computing (GEII)	2017 – 2020
IUT Nice Côte d'Azur	

CERTIFICATIONS

Green Belt Lean Six Sigma (Industry) CESI Certification / UL6S, per AFNOR standard NF X06-091:2025 (2026).

LANGUAGES

French (native) · English (B2 — TOEIC 815/990) · Arabic (native) · Spanish (beginner, in progress)
