PROFILE

General engineer from CESI (Lean Six Sigma major, graduated September 2026) with 3 years of industrial IT work-study at OPmobility (Powertrain – C-Power). Led the deployment of the DELMIA Apriso MES/PES at an 18-line plant and connect shop-floor data to IT through OT/IT integration: OPC UA / Kepware, Siemens PLCs (TIA Portal, Step7), Node-RED → InfluxDB → Grafana monitoring, multi-site application support. Solid understanding of production processes and continuous improvement (Lean Six Sigma Green Belt training). Working proficiency in English (TOEIC 815). Available for a permanent position from November 2026.

CORE SKILLS

- **MES & Industry 4.0:** DELMIA Apriso (PES) · ISA-95 architecture · IT/OT integration · production traceability · gap analysis, acceptance testing, go-live, hypercare · end-user training
- **Connectivity & monitoring:** OPC UA · Kepware · MQTT / Sparkplug B (study) · Node-RED · InfluxDB · Grafana · SCADA · Siemens PLCs (TIA Portal, Step7)
- **Data & IT:** SQL · Power BI · Python · JavaScript / React · Docker · L1-L2 application support (ITIL) · Microsoft 365
- **Continuous improvement & project management:** Lean Six Sigma (Green Belt, theory) · DMAIC · VSM · FMEA · 5S / SMED · WBS, RACI, MS Project, risk analysis, QCD dashboards

PROFESSIONAL EXPERIENCE

OPmobility — Industrial IT Engineering Apprentice (work-study) | Sep 2023 – Sep 2026

Powertrain – C-Power | Alphatech site (Venette, France) + deployment mission in Lublin, Poland

- **DELMIA Apriso MES/PES deployment — Lublin plant (18 lines / 106 stations, 24/7 production), project lead (final-year project):** gap analysis of 49 features, WBS, RACI, MS Project schedule, budget ≈ €412k / 7,500 h, register of 30 risks; PES + Kepware configuration, acceptance testing, two-phase go-live, hypercare and operator training (PL/UA work instructions). Results: zero downtime at cutover, functional coverage from 40% to 90%, spend kept at ≤ 70% of budget.
- **OT/IT integration via OPC UA (Kepware) between Siemens PLCs and the MES:** interface specification, tag matrix, script-based reconciliation (Python/Excel), station-by-station testing (ST2–ST4), troubleshooting of cyclic data exchanges.
- **OPC UA tag monitoring at the Vigo plant (Spain):** Node-RED → InfluxDB → Grafana architecture (Docker) covering 41 critical tags out of 2,227, 8-criteria decision matrix; 100% availability (vs 97%), tag loss detected in 14 s (vs 3 h), zero false positives.
- **DASIP (in-house SCADA for machine data collection) — application administrator and L1-L2 support for 10 plants in 7 countries:** OPC UA source configuration, tickets, deployments, user guides and training of site key users (ITIL).

DEIF Mediterranean — Technical Support (work-study) | Oct 2018 – Jun 2022

Valbonne, France

- Phone technical support on control and automation solutions (energy & maritime), including PID control.
- Testing and validation work; writing of technical documentation.

ACADEMIC PROJECT (CESI)

Lean Six Sigma Green Belt — DMAIC case study (Alstom rolling stock)

- Train-release delays caused by door non-conformities: Define (SIPOC, CTQ) and Measure (data collection, capability study, Minitab) phases.

EDUCATION

- **General Engineering Degree (Diplôme d'ingénieur), Lean Six Sigma major** — CESI, France, 2023–2026 (graduated September 2026)
- Electronics & Embedded Systems engineering programme (completed through 4th year of higher education) — Polytech Nice-Sophia, 2020–2022: embedded systems, IoT, power electronics
- DUT (technical degree) in Electrical Engineering & Industrial Computing (GEII) — IUT Nice Côte d'Azur, 2017–2020

QUALIFICATIONS & LANGUAGES

- Lean Six Sigma Green Belt — theory component passed (CESI / UL6S, 2026); certification project pending
- French (native) · English (B2 — TOEIC 815/990, spoken and written) · Arabic (native) · Spanish (beginner, in progress)

INTERESTS

Marathon, football, surfing, calisthenics · Travel and world cultures · Strategy games · Tech watch
